# GoldStory Token - Investor Plan

## GOLDSTORY - OFFICIAL INVESTMENT PLAN

### PROJECT VISION

GoldStory is an innovative project backed by physical gold, aimed at investors seeking a secure and profitable alternative within the crypto ecosystem. Through the GS token, investors can participate in the purchase, resale, and appreciation of gold with transparency, traceability, and a clear profitability model.

### FUNDRAISING GOAL - STAGE 1

- Target amount: \$1,200,000 USD
- Estimated duration: 1 month
- Platform: Uniswap (Polygon network)
- Gold purchased weekly: 10 kg
- Gold price (LBMA): \$108,000 USD/kg (variable)
- Purchase discount: -8%
- Refinery discount: -2% off LBMA price
- Initial tokens on the market: 100,000 GS (total value of \$15,700 USD)

Each dollar invested is rotated up to 4 times per month, multiplying the capital's profitability.

**Important:** Profits for investors will begin to generate only once the \$1,200,000 USD fundraising is completed. That is when the gold buying, rotation, and selling system is activated.

### UNISWAP POOL STRUCTURE

#### 1. INITIAL POOL — Limited Offer

- Price: \$0.157 USD per GS
- Available tokens: 100,000 GS
- Exclusive to early investors

#### 2. SCALABLE POOLS

- Minimum price: \$0.25 USD
- Estimated maximum price: \$1.50 USD
- The price increases in stages as capital is raised
- Concentrated liquidity pools will be used to increase the price progressively

### INVESTOR PROFITABILITY

There are two ways to generate returns in the project:

1. Through the increase in the value of the GS token (buy low, sell high)
2. Through capital rotation in the gold buying and selling process (operational model)

## GoldStory Token - Investor Plan

**TABLE 1: Estimated Profitability by GS Token Price Increase**

Investment USD	Purchase Price (GS)	Sale Price	Estimated Profit %	Net Profit	Final USD Total
\$100	\$0.157	\$0.25	59%	\$59	\$159
\$100	\$0.157	\$0.50	218%	\$218	\$318
\$100	\$0.157	\$1.00	536%	\$536	\$636

**TABLE 2: Monthly Profitability from Gold Rotation (Operated Capital)**

Investment USD	Rotations/Month	Profit per Rotation	Monthly Return	Estimated Profit	Final USD Total
\$1,000	4	1.5%	6%	\$60	\$1,060
\$1,000	4	2%	8%	\$80	\$1,080
\$1,000	4	3%	12%	\$120	\$1,120

Approximate values. Rotation may vary weekly, and the return is subject to the margin generated in gold trading.

### HOW THE SYSTEM WORKS

1. Investors acquire GS on Uniswap
2. Funds are used to buy physical gold at a discount
3. The gold is sold to refineries
4. Capital returns and is reused (up to 4 times/month)
5. Profits are distributed monthly to holders

A liquidity reserve remains active on Uniswap to maintain market health.

### COMPANIES SUPPORTING THE PROJECT

- Qyu Tech Gold & Diamond Conakry – Guinea Conakry
- Canalmarket Gold & Diamond DMCC – Dubai, United Arab Emirates

These companies are directly involved in the physical gold supply and trading chain for each investment cycle.

## GoldStory Token - Investor Plan

### ADVANTAGES OF THE GOLDSTORY MODEL

- Real-time liquidity through Uniswap
- Direct participation in the commodities market (gold)
- Full transparency in purchases and sales (on-chain)
- Monthly rewards with future staking potential

### MONITORING AND TRANSPARENCY

The dashboard on the official website shows:

- Total capital raised
- Amount of gold purchased
- Number of capital rotations
- Next distribution date

Public monthly reports will be published.

### CONCLUSION

GoldStory offers a unique opportunity to invest in a token with real backing, immediate utility, and a controlled growth strategy.

Enter now at \$0.157 before the token reaches \$1.50 in future pools. Early investors always win more.
